## Technical Structure of Multisensory Space

The Multisensory Space can be set up permanently in a class room. The Space is separated with white side curtain from the other areas. Storage and technical equipment are situated outside the Space.

Storage is for fabrics, carpets, small decoration items etc.

Curtains and large images create warm atmosphere.

Class room area can be used for teaching or meetings. Whiteboards are movable.

Furniture are light and easy to move.

A portable projector in the class room area can be used to project pictures to the side curtain.

The projector which is attached to the ceiling is used for projecting images on the wall. Other image is projected through the side curtain.

White side curtain separates the Multisensory Space from the class room and works also as a screen for projector.

AV-equipment and projector are connected to the desktop computer.
